

# Sunlight Rays and Pipelines Game Task Card

1. Select **6** students to play the game at one time.

2. Choose a game piece and place it on the **start** space.

3. Roll the die to decide who will play first. The person with the highest number goes first. Continue taking turns in a clockwise order, from the first person.

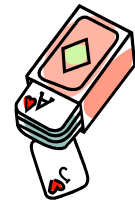

4. If you land on a **pipeline**, you must '**SLIDE DOWN**' because you are drilling for fossil fuels and this contributes to the greenhouse effect.

5. If you land on a **ray of sunlight**, you must '**SLIDE UP**' because you are using solar energy, which is renewable energy.

6. If you land on a **trivia card** space, a group member will pick up the top card from the pile and ask you a question.

7. If you answer **correctly**, you can have another turn. If you answer **incorrectly**, you remain on the same space. Make sure the trivia card is placed at the bottom of the pile.

8. The first person who lands on the **finish** space wins the game.
